Establishing a Resource-Circulating Society in Asia: Challenges and Opportunities (Sustainability Science)

Establishing a Resource-Circulating Society in Asia: Challenges and Opportunities (Sustainability Science)

This book addresses the issues associated with sustainable resource-circulating societies. It focuses on Asia, where both population growth and economic growth are increasingly prominent in the global context.

The volume is divided into five chapters that cover topics related to technological or socioeconomic issues or a combination of both. The authors examine theories and visions pertinent to resource-circulating societies, as well as relevant practices and initiatives at all levels—national, local, and industrial—and through urban–rural linkages. The book also proposes an integrative approach combining the concepts of a resource-circulating society and a low-carbon society, both of which constitute fundamental components of a sustainable society.

This volume provides policymakers, business leaders, and experts in the field with comprehensive knowledge concerning future visions, initiatives, and practical applications in the promotion of a sustainable resource-circulating society in Asia.
