For introductory courses in computer science and engineering.
This package includes MyProgrammingLab™

Learning to Program with ANSI-C
Problem Solving and Program Design in C teaches readers to program with ANSI-C, a standardized, industrial-strength programming language known for its power and probability. The text uses widely accepted software engineering methods to teach readers to design cohesive, adaptable, and reusable program solution modules with ANSI-C. Through case studies and real world examples, readers are able to envision a professional career in programming.

Widely perceived as an extremely difficult language due to its association with complex machinery, the **Eighth Edition** approaches C as conducive to introductory courses in program development. C language topics are organized based on the needs of beginner programmers rather than structure, making for an even easier introduction to the subject. Covering various aspects of software engineering, including a heavy focus on pointer concepts, the text engages readers to use their problem solving skills throughout.

Personalize Learning with MyProgrammingLab™
MyProgrammingLab is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them better absorb course material and understand difficult concepts.

MyProgrammingLab allows you to engage your students in the course material before, during, and after class with a variety of activities and assessments.
